Preface xi
D. Pavlov (Sofia, Bulgaria)

1. The Gaston Planté Medal

Ernst Voss: The Gaston Planté Medallist 1989 3
D. Pavlov (Sofia, Bulgaria)

The Gaston Planté Medal Address 7
E. Voss (Kelkheim/Ts., F.R.G.)

2. Studies of Positive Plates in Lead/Acid Batteries

Crystal growth of PbO_2 and its relation to the capacity loss of positive plates in sealed lead/acid batteries. 13
J. Yamashita, H. Yufu and Y. Matsumaru (Osaka, Japan)

Phenomena at the interface between positive active material and lead–calcium–tin grids 23
K. Takahashi, N. Hoshihara, H. Yasuda, T. Ishii and H. Jimbo (Shizuoka, Japan)

Behaviour of the $PbO_2/PbSO_4$ electrode in sulphuric acid containing tin ions. 33
E. Voss, U. Hullmeine and A. Winsel (Kelkheim/Ts., F.R.G.)

Currentless passivation of the PbO_2 electrode with respect to the influence of tin . . . 41
H. Döring, J. Garche, H. Dietz and K. Wiesener (Dresden, G.D.R.)

Passivation of the positive electrode of the lead/acid battery: a consequence of self-discharge 47
J. Garche (Dresden, G.D.R.)

Oxidation mechanisms of lead sulphate in sulphuric acid — overview 55
Z. Takehara (Kyoto, Japan)

Processes at the micro-level in the oxidation of $PbSO_4$ to PbO_2 during charging of lead/acid battery positive plates. 77
D. Pavlov, E. Bashtavelova, (Sofia, Bulgaria), D. Simonsson and P. Ekdunge (Stockholm, Sweden)

Behaviour of the $PbO_2/PbSO_4$ electrode with regard to charging regime and small additions of phosphoric acid to the sulphuric acid electrolyte. 99
U. Hullmeine, E. Voss and A. Winsel (Kelkheim/Ts., F.R.G.)

Influence of activators and inhibitors on the positive active material of lead/acid batteries. 107
E. Hasik and M. Paszkiewicz (Poznań, Poland)

Influence of arsenic, antimony and bismuth on the properties of lead/acid battery positive plates 117
D. Pavlov, A. Dakhouche and T. Rogachev (Sofia, Bulgaria)

Degradation of the positive plate of the lead/acid battery during cycling 131
S. Atlung and B. Zachau-Christiansen (Lyngby, Denmark)

Insertion mechanism of the lead dioxide electrode 143
H. W. Uhlig (Berlin, G.D.R.)

Elsevier Sequoia/Printed in The Netherlands

The energetic coefficient in lead/acid battery positive plates 153
C. V. D'Alkaine, M. A. Santanna dos Santos and L. A. Avaca (São Carlos, Brazil)

3. Studies of Negative Plates in Lead/Acid Batteries

Film formation in the Pb(II) region of the Pb/H_2SO_4 system 161
L. A. Avaca, E. R. Gonzalez, G. Tremiliosi-Filho and C. V. D'Alkaine (São Carlos, Brazil)

Kinetics of hydrogen evolution reaction on lead/acid battery negative plates with silicate and antimony added to the electrolyte 169
K. Vijayamohanan, S. Sathyanarayana and S. N. Joshi (Bangalore, India)

Study of electrode processes in Pb/H_2SO_4 + additive systems 177
S. Sternberg, V. Brânzoi and L. Apăteanu (Bucharest, Romania)

Effect of organic additives on the lead/acid negative plate. 185
S. Gust, E. Hämeenoja (Porvoo, Finland), J. Ahl, T. Laitinen, A. Savonen and G. Sundholm (Espoo, Finland)

Design of additives to enhance the performance of the lead anode in sulphuric acid 193
S. B. Hall, G. A. Wright and I. G. Mawston (Auckland, New Zealand)

4. Modelling of Lead/Acid Batteries

A simplified model of the lead/acid battery 201
M. Maja and P. Spinelli (Turin, Italy)

The aggregate-of-spheres ('Kugelhaufen') model of the $PbO_2/PbSO_4$ electrode 209
A. Winsel, E. Voss and U. Hullmeine (Kelkheim/Ts., F.R.G.)

Mathematical modelling of tubular-plate lead/acid batteries 227
O. E. Abdel-Salam (Irbid, Jordan)

Mathematical models for anodic polarization of the lead/acid positive electrode. 237
P. Björnbom (Stockholm, Sweden)

Mathematical modelling of current–potential curves for the Pb/H_2SO_4 system 243
S. Sternberg, L. Apăteanu and V. Brânzoi (Bucharest, Romania)

Modelling of the cold-cranking performance of automotive lead/acid batteries 249
M. T. Loponen and P. Jalas (Porvoo, Finalnd)

5. Measurements of Lead/Acid Battery Characteristics

Determination of discharge time and capacity by short-period discharge method 257
A. B. Djordjevic (Belgrade, Yugoslavia)

Impedance of porous electrochemical systems: study of the negative active mass of the lead/acid battery. 269
K. V. Rybalka and L. A. Beketaeva (Moscow, U.S.S.R.)

Non-stationary impedance analysis of lead/acid batteries. 275
Z. Stoynov, B. Savova-Stoynov and T. Kossev (Sofia, Bulgaria)

Impedance measurements of the lead/sodium sulphate system: synthesis of a.c. analogue circuit 287
M. Bojinov and B. Monahov (Sofia, Bulgaria)

Impedance studies of inter-cell welds in automotive lead/acid batteries 301
Z. Stoynov, B. Savova-Stoynov and T. Kossev (Sofia, Bulgaria)

Time effects in conductivity measurements of lead/acid battery electrodes 309
M. Calábek, (Brno, Czechoslovakia) and K. Micka (Prague, Czechoslovakia)

Measurement of the contact resistance between the active mass and the current collector in lead/acid battery electrodes 315
K. Micka (Prague, Czechoslovakia) and M. Calábek (Brno, Czechoslovakia)

Method and device for testing separators by measuring local transverse electrical resistance 321
V. V. Ionov, V. V. Isakevitch, E. E. Katalevsky and A. J. Chernokoz (Vladimir, U.S.S.R.)

Conference Announcements 325
